The background of the slide is an aerial photograph of a city skyline, likely Dubai, with numerous skyscrapers. The image has a teal/cyan color cast. A dark, semi-transparent rectangular overlay is positioned in the center-left, containing the title and main text. On the right side of the slide, there are decorative white wavy lines that curve upwards and outwards. The word 'EMAAR' is visible on one of the buildings in the background.

Introduction

This report looks at how Samsung is doing in sales, making products, and shipping them around the world. As the Data Analyst, I used all our raw company data to find out what is making us money and what is slowing us down. The goal is simple: show where we are winning (like our \$104M profit) and fix problems like shipping delays and factory defects. This report gives the company a clear plan to stay ahead of the competition.

About Tables

Table Name	Description	Key Information Tracked
1.Sales	Revenue & Profit	Prices, discounts, and final margins.
2.Production	Manufacturing	Total units made and factory defect rates.
3.Inventory	Stock Management	Current stock vs. Safety Stock.
4.Shipments	Logistics	Carrier performance and delivery delays.
5.Customers	Market Reach	Customer types and Country.
6.Suppliers	Supply Chain	Supplier quality scores and part lead times.
7.Product	Product Catalog	categories, unit costs, and retail prices.
8.Procurement	Raw Material Orders	Purchase order costs, quantities bought from suppliers, and lead times.
9.Facility	Location Details and Warehouse	Manufacturing plants and warehouses in Korea, Vietnam, USA, and India.
10.Date	Time Dimension	Calendar details (Years, Quarters, Months) for time-based tracking.

Table Schema

Objetivos

The main goal of this project is to use data to help Samsung run better and make more money. By looking at the six key pages of our dashboard, we want to achieve several important things. First, we use the Overview page to watch our total profit and ensure our money is growing. On the Customer and Supplier pages, we look for our best buyers and the most reliable partners to keep our business strong. We also use the Inventory and Production pages to make sure we are making high-quality products with very few mistakes and that we never run out of stock in our warehouses. Finally, the Shipment page helps us find out why deliveries get delayed so we can get products to our customers faster. Altogether, these pages help the company stop guessing and start making smart decisions based on real facts.

White, wavy, line-art style graphics are positioned in the top-left and bottom-right corners. A central horizontal band is semi-transparent, serving as a background for the text.

PROJECT DETAILS

Our Values

Customer Satisfaction

While our analysis identifies Amazon as our top-performing sales channel by volume, their average customer rating remains at a mid-tier level. This indicates a significant area for improvement, as increasing satisfaction for our largest buyer could further boost brand loyalty and long-term revenue. I have specifically addressed the financial impact and strategic plan for this in the **SQL INVESTORS (Profit & Growth Focus) section under Question 7**, where I break down how improving these service levels will drive higher growth.

Production Scaling & Channel Improvement

Our research shows that **we have the capacity to increase production by 20%**. The supply chain is fully prepared to handle this growth, as all operational factors—from manufacturing to logistics—are supportive of the expansion. Our only primary concern is Amazon’s mid-level customer rating. As addressed in Question 7 of the SQL INVESTORS section, improving this rating is our top priority to ensure that our largest sales channel can successfully support this 20% increase in volume. **INVESTORS (Profit & Growth Focus) section under Question 8**.

Production Optimization & Cost Saving Strategy

Our data shows a major "Over-Production" issue that is tying up company cash. For example, we produced over **347 million units of the Galaxy S24 Ultra, but only sold about 8.1 million units. This leaves a massive surplus of 339 million unsold items.** We see a similar pattern with the Galaxy Buds2 Pro, where 294 million units remain unsold. **COO (Operations Head) Question 1**.

The Strategy: We should immediately reduce production for these two items to match actual market demand. By stopping this over-production, we can save millions in raw materials and warehouse costs. This allows us to shift our budget and focus toward newer, high-demand products, making our supply chain leaner and more profitable.

product_name	total_quantity_produced	total_quantity_sold	production_gap
character varying (100) 	bigint 	bigint 	bigint 
Galaxy S24 Ultra	347369757	8120856	339248901
Galaxy Buds2 Pro	302526040	8028894	294497146

Our Values

Logistics Performance & Delivery Targets

Our current shipping performance stands at **92.36%**, which is considered a **stable and acceptable level** for global operations. However, to reach "Excellent" delivery status and match the highest industry standards, we need to hit a **target of 95% to 98%. This 3-5% gap** represents a key area of improvement for our logistics team. By analyzing the root causes of delays—such as the security check bottlenecks identified in our shipment dashboard—we can refine our carrier routes and scheduling to ensure our products reach customers faster and more reliably. **Supply Chain Manager Question -2.**

Root Cause Analysis: Bridging the 95% Delivery Gap

Improve our shipping performance from 92.36% to the "Excellent" range of 95-98%, we must address the specific bottlenecks identified in our data. Our analysis shows that **Carrier Capacity is the leading cause of delays**, accounting for 15.71% of all issues, followed closely by **Documentation Issues (13.61%)** and Port Congestion (12.74%).

Top 3 Delay Drivers

- Carrier Capacity (15.71%): Not enough space on ships/planes.
- Documentation Issues (13.61%): Errors in paperwork or missing forms.
- Port Congestion (12.74%): Busy ports causing docking wait times. **Supply Chain Manager Question-4.**

Strategic Discount Evaluation

Our analysis of the Discount Effectiveness data reveals a very positive trend: sales with 0% discount account for the **highest volume of transactions at 51.13%**. This indicates **strong brand value and customer loyalty**, as more than half of our customers are willing to purchase products at full price. This insight suggests that we do not need to rely on constant heavy discounting to drive sales. By being more selective with our promotions, we can protect our profit margins and focus discounts only on specific inventory that needs to move faster. **Sales & Marketing Head Question -2.**

Our Values For Indian Market

Geographic Mismatch: Why India's Offer Efficiency is Low

Our analysis indicates that Samsung India currently has the lowest "Offer Price Efficiency" compared to other regions. A major driver of this inefficiency is the mismatch between our storage locations and our primary demand centers. Currently, our main warehouse is located in Mumbai, while our largest market is in Delhi. This geographical gap creates significant and unnecessary transportation costs. **By moving products over 1,400km across the country**, we are increasing overhead, which limits our ability to offer more competitive pricing to customers. Relocating or **adding a distribution hub closer to Delhi would drastically reduce transit costs and allow for better pricing** strategies in our top-performing market. **Procurement Manager Question 1.**

Seasonal Profitability & Market Trends

Our regional data for India highlights a significant surge in profitability during the fourth quarter, specifically in October and December. This trend is driven by two major shopping seasons:

1. The Festival Peak (October): High consumer demand during the Navratri and Diwali season, fueled by major e-commerce events like "Big Billion Days," leads to a massive spike in sales volume and revenue.
2. Year-End Momentum (December): Christmas and year-end clearance sales maintain this profitability as customers look for holiday deals and upgrade their devices before the new year.

By identifying these highly profitable windows, we can better plan our inventory stocking and marketing budgets to ensure we fully capitalize on these peak demand periods without facing stockouts. **Indian Market Question-2**

Data Integrity Alert: Indian Market Channel Reporting

Our global analysis shows a significant "Data Gap" in the Indian market. While other regions report sales across **three main channels—Online, Direct, and Retailer**—the Indian dataset currently only shows Online records. Given that the offline retail market (brick-and-mortar stores) is a massive part of Samsung's success in India, this missing data is a major concern. Without Direct and Retailer records, our current dashboard is likely under-reporting the true scale of India's sales and profits. We strongly recommend integrating the offline POS (Point of Sale) data to get a complete 360-degree view of the Indian market **performance. Indian Market Question 4.**

The Project

To summarize, our analysis shows that Samsung is in a strong position with a \$104M profit, but we can perform even better by reducing waste. We found that we are over-producing certain items like the Galaxy S24 Ultra, which creates high storage costs. By cutting back on this extra stock and moving our warehouses closer to big markets like Delhi, we can save a lot of money on transportation.

Even though we have a few challenges, like Amazon's mid-level ratings and some missing offline data in India, our brand is very healthy—proven by the fact that 51% of our customers buy at full price without any discounts. If we fix our top shipping delays and focus on these high-profit areas, we can safely increase production by 20% and reach our goal of "Excellent" performance.

The background of the slide is a photograph of a city skyline at dusk or dawn. Several tall skyscrapers are visible, some with lights on. In the foreground, there's a body of water and some greenery. A dark, semi-transparent overlay covers the middle part of the image, where the text is placed. The overlay has some decorative white wavy lines on the right side.

Concept In Business

Key Takeaways for the Team:

- Stop Over-Production: Save money by making only what we sell.
- Fix the Logistics Gap: Move stock closer to the customers in India.
- Improve Quality: Turn "Mid-level" ratings into "Excellent" ones.
- Trust the Brand: We don't need constant discounts to succeed.
